SurgeryPod

How does it work?

SurgeryPod uses a unique technology to record patient measurements and responses securely and accurately, while keeping key information up to date. This information is automatically and immediately saved to your personal records.

Why should I use it?

SurgeryPod maximises the time spent with your GP, as routine questions and measurements will be available in advance to the appointment. Patients can take control over their own health and track progress using SurgeryPod.

When should I use it?

There is no appointment needed to use the SurgeryPod, this allows flexibility for patients to utilise at a convenient time. Always try to use the SurgeryPod prior to face-to-face consultation, to maximise discussion time with the GP.

Simple to use:
**Just follow
the onscreen
instructions**
